

These are the basic building blocks of any English paragraph. Likewise five fundamental things are used to construct any simple or complex program that are **keywords, identifiers, operators, separators, literals**.

## Keywords

Keywords are the reserved words whose meaning is pre-defined by the programming language specification. They convey some special meaning in the programming.

Let's take an example of C keyword: **int** in C is used to declare an integer type variable.

C has total 32 keywords.

auto	break	case	char	const	continue	default	do
double	else	enum	extern	float	for	goto	if
int	long	register	return	short	signed	sizeof	static
struct	switch	typedef	union	unsigned	void	volatile	while
